

Exercise: Unit Testing

Problems for exercise and homework for the [Python OOP Course @SoftUni](#).

Submit your solutions in the SoftUni judge system at <https://judge.softuni.org/Contests/1949>.

In this exercise, everyone should use the source code (**skeleton**) written for each of the **four problems (01. Mammal, 02. Vehicle, 03. Hero, and 04. Student)** from the **Testing exercise**. You have the structure and functionality of the classes, and now you should **test** them. You are **NOT ALLOWED** to change the class. Cover the whole class with unit tests to make sure that the class is working as intended.

Submit **only the test** folder.
